

# Image Network

The Image.network widget in Flutter is used to display an image directly from a URL. This widget makes it easy to fetch and render images hosted on the internet.

```
1  import 'package:flutter/material.dart';
2
3  class cat2 extends StatelessWidget {
4    const cat2({super.key});
5
6    @override
7    Widget build(BuildContext context) {
8      return Scaffold(
9        appBar: AppBar(
10         title: Text('Image network'),
11         centerTitle: true,
12         backgroundColor: Colors.red,
13       ), // AppBar
14       body: Center(
15         child:
16         Container(
17           height: 450,
18           width: 300,
19           child: Image.network(
20             'https://encrypted-tbn0.gstatic.com/images?q=tbn:ANd9GcRHHVCnAE8AWCg31nO-EnW86kFsCaTg6WAtg&s',
21           ), // Image.network
22         ), // Container
23       ), // Center
24     ); // Scaffold
25   }
26 }
```

Output:

## Image network
